How to electrify container handling equipment?

For electrification of container handling equipment and other port equipment, it is important to not only look at the investment costs and total costs of ownership, but it is also important to regard the electricity grid capacity within port areas. If this is not possible, contact with the electricity network operator is necessary on forehand.

Will the port of Long Beach adopt electric cargo handling equipment?

The team estimated the adoption rates of electric cargo handling equipment by leveraging data provided by the Port of Long Beach's Electric Vehicle (EV) Blueprint. We took the port's target of a 100% EV fleet by 2030 as the most aggressive target. Figure 2. Electric vehicle stock projections for the Port of Long Beach

How can ports reduce energy costs?

ESSOP has explored two ways in which ports can minimize their energy costs by using energy storage: o Optimising how to use PV solar generation to offset grid electricity. The wholesale price of energy varies every half-hour, and on a time-of-day tariff this variation is passed onto users.

Which layout requires the lowest energy consumption to complete a container task?

The perpendicular layout requires the lowest energy consumption to complete a container task, but it has the highest non-value-added energy consumption. The U-shaped layout requires the highest energy consumption to complete a container task, but it has the lowest non-value-added energy consumption.

In this whitepaper, we delve into the transition to green terminals. By conducting a literature review, we explore various ...

study was on productivity. The terminal selected feasible measures for productivity improvement, marked with *; and that combination resulted in 10 per cent emission savings. A more ...

New grant opportunities are emerging, including the Environmental Protection Agency's Clean Ports Program, which is awarding \$3 billion to fund zero-emission port equipment and ...

In this whitepaper, we delve into the transition to green terminals. By conducting a literature review, we explore various operational strategies.

We select these four challenges of electrification for container terminals in this blog to highlight what we often hear from ports and terminals. To ...

Due to differences in the resource conditions and container transportation demands of the terminal itself, different container terminal layouts have emerged.

We use the model to minimize total transportation costs, inventory holding, handling, folding and unfolding, container leasing, and ...

The ESSOP tool can be used to experiment with different battery types and capacities in order to identify the most favourable solution for a specific port use-case.
