-----

Notably, the high-voltage aqueous zinc-vanadium redox flow battery demonstrates a high average cell voltage of 2.31 V at 40 mA cm<sup>-2</sup>, showing a Coulombic efficiency of ...

Researchers in China have developed a zinc-bromine flow battery that runs 700 cycles with no corrosion and reduced bromine concentration.

High-performance zinc-based flow batteries - The discharge capacity of the improved zinc-iodine flow battery has been significantly increased and it ...

The single-cell battery is successfully operated for 216 cycles (t = 756.10 h) after an interruption after 47 cycles (t = 163.20 h), which reveals that the gas-diffusion electrode ...

The single-cell battery is successfully operated for 216 cycles (t = 756.10 h) after an interruption after 47 cycles (t = 163.20 h), which ...

In this perspective, we first review the development of battery components, cell stacks, and demonstration systems for zinc-based flow battery technologies from the ...

Based on this strategy, alkaline Zn/Fe flow batteries using zinc as the anode and ferricyanide as catholyte active species demonstrated extraordinary cycling performance at a ...

Adopting K<sub>3</sub>Fe(CN)<sub>6</sub> as the positive redox species to pair with the zinc anode with ZnBr<sub>2</sub> modified electrolyte, the proposed neutral Zn/Fe flow batteries deliver excellent ...

The battery demonstrated stable operation at 200 mA cm<sup>-2</sup> over 250 cycles, highlighting its potential for energy storage applications.

Neutral zinc-iron flow batteries (ZIFBs) remain attractive due to features of low cost, abundant reserves, and mild operating medium. ...

Initially developed in the 1920s, ZnNi batteries were explored in the 1970s and 1980s as rechargeable batteries capable of hundreds (today ~1,000) of deep discharge cycles, ...

Notably, the high-voltage aqueous zinc-vanadium redox flow battery demonstrates a high average cell voltage of 2.31 V at 40 mA cm ...

Based on this strategy, alkaline Zn/Fe flow batteries using zinc as the anode and ferricyanide as catholyte active species demonstrated ...

High-performance zinc-based flow batteries - The discharge capacity of the improved zinc-iodine flow battery has been significantly increased and it can cycle stably for 600 cycles at 70% ...

Neutral zinc-iron flow batteries (ZIFBs) remain attractive due to features of low cost, abundant reserves, and mild operating medium. However, the ZIFBs based on Fe (CN) ...
