What is multi-functional heat insulation solar glass (HISG)?

To promote and respond to the concept of BIPVs, this study developed a type of multi-functional heat insulation solar glass (HISG) that differs from traditional transparent PV modules, providing functions such as heat insulation and self-cleaning in addition to power generation.

Can solar control glass be combined with thermal insulating glass?

Solar control glass can be combined in an IGU with thermal insulating glass to further improve the thermal insulation performance and help keep temperatures comfortable for the building's occupants all year round. It can also be combined with laminated glass to provide safety and security features, as well as sound reduction.

How does solar control glass work?

The indoor space remains bright but cooler compared to uncoated glass. In terms of thermal insulation performance, most of our solar control glass products - those with at least one silver coating, help reflect indoor heat back into the room and form a shield against the cold exterior.

Can solar control glass save energy?

Conversely, in colder climates or seasons, certain types of solar control glass can help retain indoor heat, reducing the reliance on heating systems. This balance significantly reduces the energy demands of a building, leading to more sustainable living spaces.

During the winter, low-emissivity glass can reduce heat loss while allowing high levels of valuable free solar gain to heat buildings with no significant loss in natural light. In the summer, ...

When compared to regular glass, Clear Solar Glass offers superior heat - insulation properties. Regular glass has a high solar heat gain coefficient (SHGC), which means it allows a large ...

Solar control low-e coatings are designed to limit the amount of solar heat that passes into a home or building

for the purpose of keeping buildings cooler and reducing energy consumption ...

HISG (Heat Insulation Solar Glass) features a hollow interlayer design that effectively blocks the conduction of hot and cold air, significantly reducing air conditioning energy consumption.

Solar control glass is designed to reduce overheating in homes and buildings due to solar gain. By reflecting infrared radiation and ...

Solar control glass is designed to reduce overheating in homes and buildings due to solar gain. By reflecting infrared radiation and allowing natural light through, it maintains ...

When compared to regular glass, Clear Solar Glass offers superior heat - insulation properties. Regular glass has a high solar heat gain coefficient ...

In terms of thermal insulation performance, most of our solar control glass products - those with at least one silver coating, help reflect indoor heat back into the room and form a shield against ...

During the winter, low-emissivity glass can reduce heat loss while allowing high levels of valuable free solar gain to heat buildings with no significant ...

Solar control glass is made of specially coated or tinted glass that has specific optical properties that allow it to block a portion of the sun's radiant heat energy. This glass ...

Thermal Insulation - In addition to blocking solar heat gain, solar glass also provides thermal insulation properties, helping to minimize heat loss during colder months.

To promote and respond to the concept of BIPVs, this study developed a type of multi-functional heat insulation solar glass (HISG) that differs from traditional transparent PV ...

Another standout feature of solar glazing is its superior thermal insulation. The advanced materials used in its construction create an effective barrier against heat transfer, keeping ...

Solar control glass is made of specially coated or tinted glass that has specific optical properties that allow it to block a portion of the ...
