Jerusalem's newest residential complex uses vehicle-to-grid (V2G) technology, allowing electric cars to power buildings during outages - a world first for ancient cities!

The researchers from the N.S. Kurnakov RAS Institute of General and Inorganic Chemistry and Jewish University in Jerusalem created new composite material for anodes in ...

Officials hailed it as a milestone toward climate-tech leadership, with selected projects already underway, including sodium-ion battery development and lithium-ion recycling.

Projects already underway include the development of cost-effective sodium-ion batteries and the recycling of lithium-ion batteries, which are central to renewable energy storage.

The institute--Israel's first of its kind--is set to play a central role in developing energy storage technologies, supporting ...

CATL says its sodium ion batteries will see wide application across vehicles and energy storage in 2026.

This project demonstrates how AGEERA's turnkey EMS + BESS solution enables large-scale technology campuses to achieve both energy independence and operational ...

To date, sodium-ion cells have primarily been used in energy storage installations, low-range electric vehicles, and auxiliary power systems. With average cell prices in 2025 ...

Share From ESS News hinese battery giant CATL has detailed a wider and larger-scale deployment of its sodium-ion battery range across multiple sectors, including battery ...
