How much does a 5G base station cost?

Setting up a 5G base station is expensive, with costs ranging from \$100,000 to \$200,000 per site. This price includes hardware, installation, site rental, and maintenance. Urban areas often have higher costs due to land prices and infrastructure challenges.

How much does 5G infrastructure cost?

The total cost of 5G infrastructure is staggering, with projections estimating that telecom companies will spend over \$2 trillion globally by 2030. This includes investments in spectrum, network densification, fiber backhaul, energy-efficient infrastructure, and emerging technologies such as AI and automation.

How much does it cost to upgrade to 5G?

Upgrading existing 4G sites to 5G costs between \$20,000 and \$50,000 per site. Instead of building entirely new sites, many telcos upgrade existing 4G towers to 5G, which costs between \$20,000 and \$50,000 per site. This is a more cost-effective approach, as it utilizes existing infrastructure.

How much does 5G backhaul cost?

Satellite-based 5G backhaul can cost up to \$500 per Mbps, significantly higher than fiber. In remote and rural areas where fiber optic deployment is too costly, satellite-based 5G backhaul is an alternative solution. However, it comes at a steep price, with costs reaching up to \$500 per Mbps, much higher than fiber-based solutions.
