What is a corrugated steel shipping container?

Corrugated steel shipping containers are strong enough to ship many tons of cargo without damaging them. The corrugated metal looks appealing to many, but for some people, it's an unattractive aesthetic element. Corrugated steel shipping containers are made by stamping large sheets of steel. These sheets are then cut into panels.

Is Corten steel used in shipping containers?

After all, you have probably heard of Corten steel and wondered if it was used in shipping containers. This steel, which is also known as Cor-Ten, is specially designed to withstand rust and weather without requiring painting. If you're wondering what makes these containers so sturdy and durable, read on.

What is a shipping container?

This guide will give you the knowledge you need to navigate the world of shipping container terminology. The standard shipping container is 8' 6" tall, and the most common container sizes are 20 and 40 feet long. They're created out of Corten steel, a type of weathering steel resistant to weather effects.

Why is steel used in shipping containers?

This steel has excellent corrosion-resistant properties and is used in shipping containers because it is highly resistant to the effects of atmospheric weathering. Shipping containers are continually exposed to the ravages of the elements, including wind, sun, saltwater, and ocean currents.
