What are the different types of solar panel inverters?

There are two different types of solar inverters -- the string inverter and the micro-inverter. Each type has its advantages -- but when you pick between one or the other, you're really choosing between cost and efficiency. Here are the different types of solar panel inverters: 1. String Inverters

Do solar panels need inverters?

Inverters are essential for converting solar panel DC output into home-usable AC power--your solar system won't work without one. Top inverter types include string inverters (budget-friendly), microinverters (great for shade), and hybrid inverters (battery-ready).

What type of inverter do I Need?

If you want backup power with a grid-tied system, you have options with all inverter types: Microinverter Systems: Use AC-coupled battery solutions with separate inverters for solar and batteries String and Optimizer Systems: Typically use DC-coupled solutions with hybrid inverters that handle both solar and battery functions

What are the best inverters for a rooftop solar system?

Inverters are incredibly important pieces of equipment in a rooftop solar system. There are three options available: string inverters, microinverters, and power optimizers. See our list of the best inverters of 2025. String inverters have one centralized inverter -- or, keeping with the metaphor -- one central currency exchange station.

Generally speaking, solar inverters can be categorized into three main groups (as shown in the table below). These major categories depend heavily on how they interact with ...
