What is compressed-air-energy storage (CAES)?

Compressed-air-energy storage (CAES) is a way to store energy for later use using compressed air. At a utility scale, energy generated during periods of low demand can be released during peak load periods. The first utility-scale CAES project was in the Huntorf power plant in Elsfleth, Germany, and is still operational as of 2024.

Where can compressed air energy be stored?

Compressed air energy storage may be stored in undersea caves in Northern Ireland. In order to achieve a near-thermodynamically-reversible process so that most of the energy is saved in the system and can be retrieved, and losses are kept negligible, a near-reversible isothermal process or an isentropic process is desired.

Is compressed air energy storage a solution to country's energy woes?
