Are green cellular base stations sustainable?

This study presents an overview of sustainable and green cellular base stations (BSs), which account for most of the energy consumed in cellular networks. We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the past decade.

How to make base station (BS) green and energy efficient?

This paper aims to consolidate the work carried out in making base station (BS) green and energy efficient by integrating renewable energy sources (RES). Clean and green technologies are mandatory for reduction of carbon footprint in future cellular networks.

How can mobile network architecture contribute to green networking?

The representation of the mobile network architecture along with the expanded view of the 5G base station has been depicted in Fig. 5. Improving hardware components can contribute toward green networking. It entails reducing BS's energy consumption by using energy-efficient hardware.

Why are green wireless communications important?

Green wireless communications have been an important area of study targeting the trade-off between increased mobile communications and energy consumption. The use of such technology is motivated by the prospect of higher data rates and improved performance over the existing networks[2,3].

Jan 24, 2023 &#183; Discover 5G RAN and vRAN architecture, its nodes & components, and how they work together to revolutionize high-speed, low-latency wireless communication.

Mar 17, 2022 &#183; Abstract: The high-energy consumption and high construction density of 5G base stations have greatly increased the demand for backup energy storage batteries.

Several techniques have been deployed to reduce the energy consumption of the base station in what is called a green base station. This paper presents an insight into these approaches and ...

An overview of green mobile network is presented in (Han and Ansari, 2014), where incorporation of renewable energy at the BS site or at the grid end, and its implication ...

Abstract: The rapid growth of mobile communication technology and the corresponding significant increase in the number of cellular base stations (BSs) have increased operational expenses ...

The green base station solution involves base station system architecture, base station form, power saving technologies, and application of green technologies. Using SDR-based ...

Various green communication approaches such as BS hardware improvement, sleep mode technique, radio transmission, deployment and network planning (UAV-based) and energy ...

We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the past decade.

In a wireless network base station, power consumption is the biggest issue. With global warming and energy crises becoming the most compelling environmental challenges, green solutions ...

This paper develops a method to consider the multi-objective cooperative optimization operation of 5G communication base stations and Active Distribution Network (ADN) and constructs a ...
